Full stack software engineer with hands-on experience in developing and maintaining scalable web applications across the frontend and backend. Proficient in writing clean, maintainable code and adept at solving complex problems through logical, efficient solutions. Skilled in collaborating with agile teams to deliver high-quality, user-focused software.

EXPERIENCE

Software Engineer

March 2025 – Present

Manatal | Bangkok, Thailand

- **Developed and deployed** RESTful APIs with **Django** and **FastAPI**, enabling scalable backend services that improved data handling efficiency.
- **Implemented event-driven architecture** with **RabbitMQ**, allowing microservices to seamlessly respond to legacy monolith events and reducing system coupling.
- **Incorporated OAuth client** by integrating **Keycloak** with external service provider interface (SPI) and syncing user data from external monolith server in real time.
- **Engineered a custom, AWS IAM-style permission system** enabling per-role access overrides (role, action, resource → allow/deny), selectively applied to designated endpoints via a custom decorator to preserve backward compatibility.
- **Delivered modern, responsive user interfaces** with **Vue.js**, increasing user engagement and reducing bounce rates across platforms.
- **Optimized frontend state management** with **Vuex**, improving application responsiveness and scalability for complex client-side interactions.

EDUCATIONS

Humber College, Toronto, ON, Canada

Diploma of Computer Programming, Honors

January 2023 – August 2024

RMIT University, Melbourne, VIC, Australia

Bachelor of Aerospace Engineering, Honors

2015 – 2016

Kasetsart University, Bangkok, Thailand

Bachelor of Aerospace Engineering, Honors

2012 – 2015

CERTIFICATE

AWS Certified Cloud Practitioner

December 2025

Amazon Web Services Training and Certification

PROJECT

Satang | <https://github.com/tonytkl/satang>

- Designed and developed a serverless expense tracking application to manage transactions, wallets, categories, and budgets
- Built backend services using **Golang (Go)** deployed on **AWS Lambda** for scalable, event-driven processing
- Implemented RESTful APIs via **Amazon API Gateway** for secure and efficient client-server communication
- Modeled data using **DynamoDB (Single Table Design)** with optimized access patterns for high-performance queries
- Managed infrastructure as code using **Terraform**, enabling reproducible and version-controlled deployments
